## Executive Summary

Friends of Bosnia (FOB) in Boston, Massachusetts is working with the Center for Information Technology (CIT) in Tuzla, Bosnia and Herzegovina to help them create a twenty-first century teaching facility to train bright young people in Bosnia in information technology (IT). The objectives of CIT are:

- Building and maintaining a teaching program to instruct students to design, implement and maintain enterprise management systems for wide area networks to serve government and small to medium size businesses.
- Developing an independent internet service that will provide free internet access to students and low-cost access to businesses.
- Providing employment opportunities for young people so that they do not need to leave Bosnia to pursue their professional objectives.
- Maintaining the most popular internet club in Tuzla as a source of revenue for CIT and a training for students.
- Designing and maintaining a People to People website that will present funding opportunities in Bosnia to international donors.

The management of CIT is made up of highly trained and experienced IT professional who are both students and alumni of Tuzla's College of Electrical Engineering. The Center is made up of representatives of all ethnic groups within Bosnia and is dedicated to a professional and non-partisan environment.

### The mission of CIT

To improve education, promote the values of civil society, and build a healthy climate for investments, jobs, and sustainable growth through information technology.

### The funding needs for the CIT over the next two years

Internet Club (immediate needs)	\$19,800
Internet Club (long-term needs)	\$19,800
People to People web site	\$15,670
Oracle/Java/C++ Learning Lab	\$3,650
Capital Improvements	\$25,530
Microsoft Windows 2000 Learning Lab	\$32,063
Operating Systems Learning Lab (Sun Solaris/Linux)	\$43,996
Cisco Learning Lab	\$16,112
ASP-ISP Student Internet Service	\$386,638
<b>Total funding request</b>	<b>\$.563,259</b>

## The Need for CIT

Among those dedicated to rebuilding Bosnia and Herzegovina's society, the greatest challenge today is convincing young people — especially the most talented — that they do not need to leave their country to create a future for themselves.

There is now a concerted and urgent effort to stop this “brain drain”. Bosnians are saying, “Show me. Show me that that I can stay in Bosnia, that I can provide for my children, that they can speak the same language as my parents, and that we can all have a future here.”

Revitalizing the economy, generating public support for reconciliation and moderate progressive politics, rebuilding a multi-ethnic democratic B-H as a full member of the European Community, recovering from a genocidal war, all hinge on this challenge of creating immediate and tangible opportunities.

The good news is that these opportunities exist *right now* in Bosnia and Hercegovina.

Despite unemployment approaching 80% in some regions of Bosnia, there are 100s of high paying jobs in Information Technology (IT) available today. Right now in Bosnia, entrepreneurial start-ups, large companies, and government agencies need IT specialists with hands on experience in network management and software development. Furthermore, with fully staffed IT departments, these companies can attract foreign capital and create more jobs by providing IT services to international corporations and foreign businesses.

A key problem now is that businesses are not willing to invest in training

Bosnians because of either a lack of funds or a lack of trust that, once trained, new employees will not simply emigrate with these new and highly marketable skills. On one side, you have young talented Bosnians eager to learn, to work hard and earn a living. On the other side, you have Bosnian companies and government agencies in desperate need of IT specialists.

Bridging this gap is the Tuzla Center for Information Technology (CIT), an organization founded by students and alumni of Tuzla's College of Electrical Engineering, and dedicated to the concept of education in action.

CIT works in two interrelated ways: one, CIT offers young Bosnians the invaluable experience of operating, managing and maintaining state-of-the-art computer/telecommunications equipment, thereby giving them the ability to compete in the wired, global marketplace; and two, CIT works on a more profound level by promoting the values of civil society and democracy, enabling the population at large to reach across former confrontation lines and bring their country back together again.

I invite you to learn more about CIT and I encourage you to contact me or the President of CIT, Adnan Salkic, to learn more of how you or your organization can help us in rebuilding a proud and prosperous Bosnia and Herzegovina.

With Respect and Appreciation,

**Chris Bragdon**

Outreach Bosnia Director  
Friends of Bosnia  
fob@crocker.com

## Welcome to CIT

As president of the Bosnia and Herzegovina Association for Information Technology, I thank you for taking the time to learn about our

Center for Information Technology (CIT). Founded by students and alumni of the Electrical Engineering College of Tuzla University, we are dedicated to doing our part in rebuilding our country. Our mission is to improve education, to promote the values of civil society, and build a healthy climate for investment, jobs, and sustainable growth through information technology.

Our most valuable assets are the group of dedicated and talented people we have in our management team, our building of 1,300 square feet ideally situated in the center of our city, and our internet club which is the most popular internet club in Tuzla. We are currently upgrading our internet service with the goal of not only achieving self-sufficiency but also generating revenue for further development of our center.

We are currently hosting courses in IT and provide hands-on experience to our students through maintaining our computer network. We have an excellent working relationship with Tuzla University and one of our goals is to provide an "tuzla.edu" internet-based student service for all of Tuzla University's students. We are establishing an IT ESL program with Cornell University's "English-for-Bosnia" Project. We have established several relationships with international donors including SOROS and OSCE (donated to our student conference in 1999) and are currently receiving funding from the Boston-based organization Friends of Bosnia and the Chicago-based Post-Conflict Foundation.

We are now embarking on an ambitious campaign to significantly increase our internet capacity and our computer labs for teaching all aspects of IT including SQL databases (Oracle, Borland Interbase), operating systems (Sun Solaris, Windows 2000, and Linux), web programming (Java), and network maintenance (TCP&IP).

I invite you to learn about our center, our people, our contribution to rebuilding civil society, and our plans for the future. We have both a step by step approach to improving our center and a master plan that would catapult CIT into being the most dynamic and capable IT center in the entire northeastern region of BiH if not the entire country.

I hope that you seriously consider contributing to our center whether it helps us along one step at a time or gives us a major leap forward. I am very grateful for your interest and will honor and respect whatever contribution you can make.

Please feel free to contact me or our representative in the United States, Chris Bragdon, at any time.

And if ever you are in northeastern Bosnia and Hercegovina, please visit us so I can share with you first hand our current projects and our plans for the future.

With Respect,

**Adnan Salkic**

President

The Tuzla Center for Information Technology

Phone: ++375 66 193 337

E-mail: [adnan\\_salkic@yahoo.com](mailto:adnan_salkic@yahoo.com)

## CIT Leadership Team

Adnan Salkic, *President*

Sladana Pejic: *Management Board Member, Development*

Damir Imamovic: *Chairman of the Management Board*

Jasmin Musanovic: *Management Board Member, Curriculum*

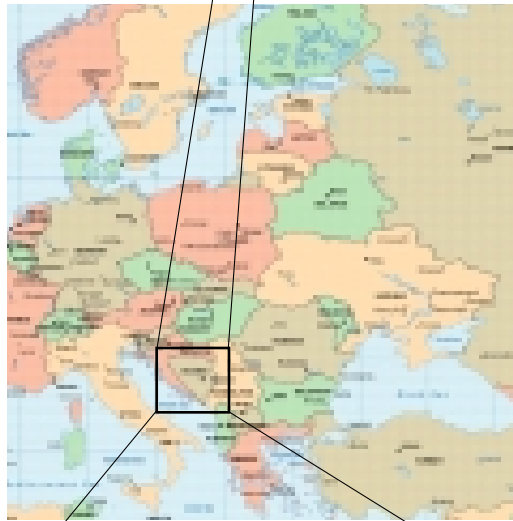

Elvedin Talic: *Management Board Member, Operations*

### **The mission of CIT**

To improve education, promote the values of civil society, and build a healthy climate for investments, jobs, and sustainable growth through information technology.

## Where is CIT

### The City of Tuzla

Tuzla, the second largest city in Bosnia, is located on a branch of the Spreca River, at the western foot of the Majevica mountain range. Nearby are stone quarries, saltworks, plum orchards, and mineral springs. A road and rail hub, Tuzla is the center of a lignite, oil, and gas region, although much of its industry has disappeared as a result of the war.

Unlike much of Bosnia, in Tuzla, Croatian Roman Catholic churches, Islamic mosques, and Serb Orthodox churches stand unscathed from the recent war. The congregations worship separately, but the people walk the streets together.

During the war, Selim Beslagic, former mayor of Tuzla, organized residents into multiethnic civic groups, protected the city's Serb minority from harassment, and worked with peace activists in Serbia and Croatia. In recognition of his efforts, Mr. Beslagic has been nominated for the Nobel Peace Prize in 1997.

Under Beslagic's leadership, Tuzla remained the largest free region in Bosnia for the duration of the war. The militia that staved off the Serb onslaught was itself 20 percent Serb.

Beslagic forbade the persecution of the city's Serb minority, personally checking up on people like Vojislava Vasiljevic. The elderly Serb woman says that whenever Beslagic saw her on the street he would stop his car and ask if she was experiencing any harassment.

Because of his vigilance, Tuzla's Orthodox church stands as one of the few Serb religious buildings in the federation that is not destroyed or defiled. In fact, the only damage the church suffered during the war came from a Serb shell in 1993.

Excerpted from October 9, 1997 edition of the *Christian Science Monitor*

## Technical Assessment

Most systems in Bosnia and Herzegovina operating over the last ten years have depended on MS DOS based systems with data base systems dBase and Clipper. Between 60 and 70% of SME's (small and mid-sized enterprises) and about 30% of government agencies still run on this antiquated system.

Many businesses and government agencies are struggling to upgrade their systems. Government agencies are quickly acquiring the latest technology but lack the required IT specialists to maintain their systems. The larger companies face the same challenge. SME's are eager to update their systems but are not able to hire the needed IT specialists. And, many SME's and government agencies that do have the latest technology are only using 20% of capacity of those systems because once again they lack IT specialists.

While there is an adequate number of pc technicians for repairing hardware, companies today in BiH need trained IT specialists with hands-on experience in hardware and software technology such as Cisco, Sun Microsystems, Oracle, Java. They need IT specialists who can design, implement and maintain enterprise management systems for wide area networks. They need IT specialist who have the communication skills to walk a customer through problem solving via the phone – a skill very few Bosnians possess.

With this shortage in trained IT specialists, it is very difficult for a major BiH company to fully staff their IT department. For instance, government agencies and large businesses have enterprise class systems which require RISC based enterprise servers with relation database management systems as a database backend engine all connected with routers and switches and protected with firewalls and public key infrastructure. The average enterprise class system requires a minimum of four IT engineers, network infrastructure engi-

neer, security engineer, database administrator, and network administrator. Furthermore, many companies and government agencies need contractors to whom they can outsource their application software needs. In all cases, there is an intense need for custom software developers for the Bosnian market.

To meet the demand for IT specialists, CIT will institute a training program that will teach the most complex and capable systems such as Checkpoint, Cisco, Oracle, Java, Sun Microsystems, IBM, Lotus. In this way, CIT graduates will have the ability to work with similar products from other vendors.

Our teaching philosophy emphasizes experiential learning with small class sizes. There is an emphasis on one-on-one tutoring and real life learning challenges, for instance, thinking on one's feet while trying to revive a crashed system. CIT intends to create a new breed of graduates who are not just "book smart" but have true experience before their first job assignment.

Please feel free to contact me if you have any technical questions regarding CIT projects.

Best Regards,

**Damir Imamovic**

Chairman of Management  
CIT

## Background Information on Friends of Bosnia

Friends of Bosnia is one of the oldest grass roots organizations in the U.S. working to increase awareness about the Balkans and supporting efforts for a long-term and just peace. Beginning in February 1993—ten months after the outbreak of war in Bosnia—Friends of Bosnia started a campaign to educate the American public about the genocide being committed against the people of Bosnia and provide humanitarian aid to its victims. Through educational projects in the U.S. and reconstruction projects in the Balkans, Friends of Bosnia continues to be at the forefront of the national effort to bring informed awareness to the issues generated by the wars in the Balkans and to provide relief for the victims.

Friends of Bosnia also provide resources to organizations and individuals across the U.S. Through our newsletter, exhibitions, speaker program, resource library, and other reference materials, we are a resource for all areas of the U.S. to draw upon for information and analysis on Bosnia and the Balkans. Friends of Bosnia was located in western Massachusetts until 1999 when it moved to Boston.

### 1998–2001 Friends of Bosnia Major Projects

#### **Outreach Bosnia, 2000-2002**

Friends of Bosnia is launching a major new initiative in eastern Bosnia, Outreach Bosnia, to help returning refugees and long-time residents rebuild their communities five years after the end of the war. Chris Bragdon from Ithaca, NY, is directing this project and has already achieved significant success both with fundraising and implementing the program

#### **Reconstructing Kosovo, 2000-2002**

A documentary photography/ text exhibit on war, reconstruction and reconciliation in Kosovo. Photographs by Glenn Ruga and Frank Ward with text by Barbara Ayotte. Has been shown in six locations across the U.S. since October 2000

#### **Cultural Heritage Reconstruction in Kosovo**

*July 2000 - September 2002*

Friends of Bosnia, in collaboration with the

Kosovo Cultural Heritage Project from Cambridge, has received a grant from the Packard Humanities Institute in Palo Alto, California to reconstruct three important cultural monuments in Kosovo that were destroyed or badly damaged by Serb forces prior to and during the war in Kosovo. Total project budget: \$350,000

#### **Medical Aid for Kosovo**

On November 27, 2000, Friends of Bosnia sent \$10,000 worth of donated medical supplies to the Prosthetics Clinic at the Pristina Hospital

#### **Emergency aid to Kosovar refugees in Macedonia**

Shortly after the war began in Kosovo on March 24, 1999, Friends of Bosnia director Glenn Ruga traveled to the Kosovo/Macedonia border to deliver emergency aid and to document the plight of refugees. Since returning, Ruga has spoken at more than twelve public meetings and to numerous radio, and TV stations and newspapers about the war in Kosovo. FOB also raised \$8000 for Kosovo relief and contributed \$5000 to El Hilal, a Macedonian relief organization working with Kosovar refugees.

#### **Roads to Reconciliation: Peacebuilding in the Former Yugoslavia**

*October-November, 1998*

FOB collaborated with the Karuna Center for Peacebuilding and the UMass Office of Jewish Affairs to organized a series of lectures and events with peace activists from the former Yugoslavia. Speakers included Jakob Finci from Sarajevo, Mirha Kratina from Zenica, Bosnia, Lidija Obad from Osiek, Croatia, and Dragan Popadic from Belgrade, Serbia.

#### **Reconstruction/Aid Project, 1998**

FOB sent a 40-ft. container of medical supplies, school supplies, and computers to Bosnia in November, 1998. The aid will help foster reconstruction and training for refugees and others who have lost their livelihood as a result of the war. Value of donated supplies: \$150,000.

#### **Washington Press Conference**

On July 28, 1998 FOB organized a press conference with Congressman John Olver to present a letter to the president signed by 80 members of Congress demanding a more forceful response to aggression by Belgrade in Kosovo. We also presented a petition to the president signed by 18,000 people demanding for the arrest of Radko Mladic and Radovan Karadzic.

#### **In Search of a Nation: Restoring a Multiethnic Bosnia, April 1998**

A conference at Wellesley College to discuss the historical basis for multiethnicity in Bosnia, current political dynamics in the Balkans including Kosovo and Serbia, US foreign policy, and the International Criminal Tribunal. Attended by more than 200 people from across the U.S. and Canada with speakers from Serbia, Bosnia, and across the United States.

# Internet Club Equipment

## Immediate Needs

Description	Unit Price \$	Quantity	Total \$

Total Long-term Needs			<b>\$19,800</b>

## People to People Empowerment Website

In partnership with Friends of Bosnia, CIT is developing an interactive website that will empower people to make "real time" donations in Bosnia. Instead of making a donation to an organization, people choose through the P2P site exactly how their money is spent. For example, a person could visit the Tuzla orphanage and click on \$20 of babies milk or a computer for the children, and the donation would be delivered within

5 days and documented on the website. The donor would also get a confirmation e-mail thanking them for their donation.

This site will be an excellent service to the effort to help Bosnia and Herzegovina recover from the war.

This site will also be an excellent learning module for CIT students.

Description	Unit Price \$	Qty	Total
IBM x330 server PIII-866 256MB 18.2GB HS RAID	\$4,900	1	\$4,900
Monitor 15" fro server	200	1	200
Digital Camera Toshiba M70 or similar	800	1	800
Web Design workstations	1,500	3	4,500
Cold Fusion Server 4.5.1 Professional	1,500	1	1,500
UPS 1400 VA	500	1	500
Tape Backup 20/40GB	700	1	700
CD-RW with 50 blank CD	250	1	250
HP LaserJet Printer 1220	520	1	520
16-port switch	1,000	1	1,000
Payment server software		1	0
Rack	800	1	800
<b>TOTAL</b>			<b>\$15,670</b>

# Oracle/Java/C++ Learning Lab

## SQL Databases

Most of Information technology is data processing. IT specialists are involved in content creation, acquisition, organization, and distribution in B2B or B2C environments or within their own organizations.

CIT's learning lab for SQL databases will teach one of the leading and most capable software infrastructures for the internet's next generation of intelligent, collaborative applications: Oracle. With this ability, CIT graduates will be competent in the most advanced data processing software as well as fully capable of managing the simpler database systems prevalent in Bosnia and Herzegovina such as Borland Interbase.

## Java

As programming language drafted for Internet computing, Java has gained more software developers than any other programming environment in recent history. This popularity is a result of multi-platform support, the capability to build applications people can use from anywhere in the world and the very large number of implemented functions and procedures that can be used in custom software projects for rapid application development. This is exactly what Bosnia needs, the lowering of the total cost of ownership for computer systems by centralizing application management

The funding requirements for establishing this learning lab is as follows:

ISBN #	Description	Unit Price \$	Qty	Total \$
0-07-212146-7	Oracle8i Advanced PL/SQL Programming	\$50	10	\$500
0-07-211-863-6	Oracle JDeveloper	45	10	450
0-07-212489-X	Oracle XML Handbook	50	10	500
0-07-212442-3	Oracle 8i for Linux Starter Kit	50	10	500
130273635	Thinking in Java	35	10	350
0-07-212160-2	Oracle8i SQLJ Programming	50	10	500
0-07-212242-0	Oracle8i Web Development	50	10	500
020170353X	Accelerated C++: Practical Programming by Example	35	10	350

Total for month:

**\$3,650**

## Capital Improvements

The following funding request will constitute a complete restoration and refurbishing of our 1,300 square foot building. With this funding, Tuzla University will extend the present lease arrangement and provide long term stability for CIT.

This funding request is as follows:

<b>Description</b>	<b>Unit Price \$</b>	<b>Qty</b>	<b>Total</b>
Computer Desks	\$150	25	\$3,750
Chairs	75	50	3,750
Floor fixing with PVC material with installation	2,650	1	2,650
Security system with installation	1,900	1	1,900
"Cortega" type of roof with installation	2,450	1	2,450
Air-conditioning system with installation	4,500	1	4,500
Lab's furniture	1,500	1	1,500
PVC doors, windows with installation	2,600	1	2,600
FSN light beams 4x18 W with installation	950	1	950
Electrical installation with cable PGP 3x1,5 for light beams	330	1	330
Wall painting inside	450	1	450
Wall painting 2nd time inside	280	1	280
Wal painting outside	420	1	420
<b>Total</b>			<b>\$25,530</b>

# Microsoft Windows 2000 Learning Lab

One of most popular operating systems today in desktop environment is Microsoft Windows 9x, NT and 2000. Windows 2000 is gaining more and more users every day through easy to use, improved stability and lower TCO

in small, medium and enterprise market as desktop and server operating system.

The funding requirements for this lab are as follows:

# Operating Systems Learning Lab Sun Solaris/Linux

The Operating Systems Lab will provide attendees with the ability to get up to speed with one of most stable and secure operating systems today. Together with Microsoft Windows 2000, Sun Microsystems make 90% of operating infrastructure in BiH and more then 70% in rest of the world.

System engineers and administrators in CIT will get hands on experience with installing and maintaining secure and high available intranet and internet

business sites in small, medium and enterprise companies. Also this lab will be used for education with fastest growing operating system, Linux. Linux has not yet entered the enterprise arena but our students will be ready to implement this open source product as CIT anticipates this system to become prevalent in BiH IT relatively soon.

The funding requirements for this lab are as follows:

Description	Unit Price \$	Qty	Total \$
<b>25 Seat Class bundle</b>			
25 seat Sun Ray 100 appliance workgroup bundle. Includes configured E250 server and 25 Sun Ray 100 appliances. Country kits ordered separately.	\$30,430	1	\$30,430

# Cisco Learning Lab

The Cisco Learning lab teaches students to design, build, and maintain computer networks. This learning lab prepares CIT students for the 21st Century workplace with an emphasis on hands on training. CIT will keep class sizes small to give students ample one-on-one tutoring while reviving

crashed systems. It is CIT's goal to have students who are beyond "book smart" and are armed with real life experience in network management.

The funding requirements for this learning lab are as follows:

<b>Part #</b>	<b>Description</b>	<b>Unit Price \$</b>	<b>Qty</b>	<b>Total \$</b>
<b>CISCO Routers</b>				
CISCO1750-2V	Cisco 1750 10/100 Modular Router w/2 Voice channels, IOS IP/VOICE + SW	\$2,295	3	\$6,885
WIC-1B-S/T	1-Port ISDN WAN interface Card(dial and leased line)	500	2	1,000
CAB-SS-X21MT	X.21 Cable, DTE Male to Smart Serial, 10 Feet	100	2	200
WS-C2912-XL-EN	12-port 10/100 Switch (Enterprise Edition)	1,495	1	1,495
<b>Telindus Modems (<a href="http://www.telindus.be">www.telindus.be</a>)</b>				
165 893	CROCUS SDSL 220V TT. Modem	949	3	2,847
142 200	X.21 Interfejs CROCUS serije	155	3	465
152 489	BRIDGE Interfejs (Nx64K) CROCUS HDSL/SDSL serije	450	2	900
152 490	ROUTER Interfejs (Nx64K) CROCUS HDSL/SDSL serije	560	2	1,120
<b>PTT Dial-up lines</b>				
	BRI ISDN line	350	2	700
	POTS line	250	2	500
Total				<b>\$16,112</b>

## ASP-ISP Student Service

As with most universities, the need is for an information system that students can use 24 hours a day. To provide students with such a system, CIT will design and maintain a system capable of handling the student population of the entire city of Tuzla. This system will give any student the use of 50 MB of data storage, an e-mail address with additional 50 MB of storage, the free

use of office productivity software (Staroffice) and unlimited Internet access from CIT facilities or home. Also, the design submitted in this proposal will have the lowest possible TCO in today's market.

The funding requirements for this system are as follows:

Part #	Description	Unit Price \$	Qty	Total \$
<b>CISCO Routers</b>				
CISCO3662-AC	Dual 10/100 E Cisco 3660 6-slot Modular Router-AC with IP SW	\$11,700	1	\$11,700
NM-2CE1B	2-Port Channelized E1/ISDN-PRI Balanced Network Module	4,200	2	8,400
NM-30DM	30 Port Digital Modem Network Module	8,600	2	17,200
S366CHK2-12103T	Cisco 3660 Series IOS IP/FW/IDS PLUS IPSEC 3DES	5,000	1	5,000
MEM3600-8U16FS	8-to-16MB Flash Factory Upgrade for the Cisco 3600	700	1	700
MEM3660-32U96D	32-to-96MB DRAM Factory Upgrade for the Cisco 3660	3,848	1	3,848
MMTL-3600-30	Modem management technology license for 36003,000		1	3,000
<b>SUN Equipment for E-mail, Application Providing</b>
